Update of the risk assessment of hexabromocyclododecanes (HBCDDs) in food

<https://efsa.onlinelibrary.wiley.com/doi/10.2903/j.efsa.2021.6421>

► The European Commission has asked EFSA to update its 2011 risk assessment on hexabromocyclododecanes (HBCDD) in food. HBCDDs, mainly mixtures of α -, β - and γ -HBCDD stereoisomers, were flame retardants, widely used additives. Concerns have been raised due to the presence of HBCDD in the environment, food and in humans. The CONTAM panel concluded that current dietary exposure to HBCDD in European countries does not raise any health concerns. An exception is breastfed infants with high milk consumption, for whom the lower exposure values may raise a health problem.

NOVEL FOOD

Safety of oil from *Schizochytrium limacinum* (strain FCC-3204) for use in infant and follow-on formula as a novel food pursuant to Regulation (UE) 2015/2283

<https://efsa.onlinelibrary.wiley.com/doi/10.2903/j.efsa.2021.6344>

► The EFSA Panel on Nutrition, Novel Foods and Food Allergens has been invited to give an opinion on the safety of oil of *Schizochytrium* sp. as a novel food. On the basis of the available toxicological data on oils derived from *Schizochytrium* sp., the safety status of the source of the novel food, the production process, its composition and the absence of viable cells, the Panel considers that there are no concerns about the toxicity of the novel food. The Panel therefore concludes that *Schizochytrium* sp., as a novel food, is safe under the proposed conditions of use.
